

Perennial ryegrass

The Fantastic PAN-European Variety!

- CALIBRA copes with all climates
- CALIBRA has a high sugar content
- CALIBRA is highly digestible
- CALIBRA yields very high and stable

Ratings

Has Proved to Cope With all Kinds of Weather

CALIBRA has proved to do what no variety has ever done before: To be very productive under a long growing season as in UK, to be very disease resistant especially against rust in France and to be very winterhardy even in Russia!

A Very High Digestibility and Sugar Content

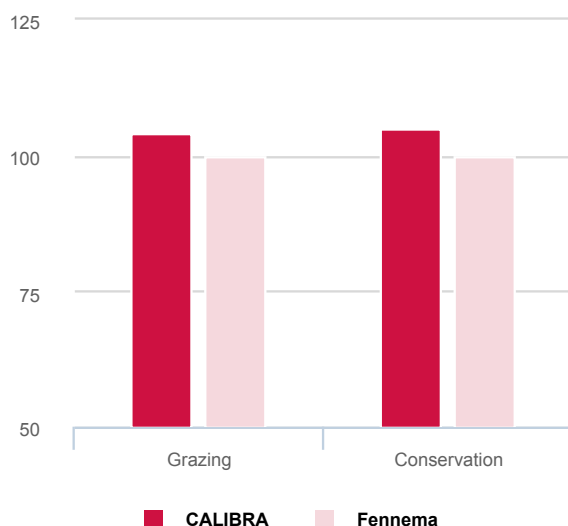

The digestibility of CALIBRA is high, which is related to the high sugar content of the variety.

Very High and Stable Yields

Good spring growth combined with intermediate heading is useful for early production. The regrowth and production over summer is very high. This places CALIBRA among the top varieties.
