alseed.com

- Large, red grain color and high test weight
- Semi-open panicle and good head exertion allows for great threshability
- Excellent late season standability and staygreen
- Highly adaptable in northern regions, and is a great fit for a double crop system, or dryland production
- In longer season production areas, this hybrid can beat the drought by maturing early
- With irrigation or good rainfall, flexes up and has excellent yield potential for an ultra-early hybrid
- Excellent disease resistance including anthracnose, downy mildew and head smut

AGRONOMICS

Uniformity:	4
Seedling Vigor:	5
Drought Tolerance:	5
Lodging Resistance:	5
Threshability:	5

DISEASE TOLERANCE

Anthracnose:	5
Sugar Cane Aphid:	5
Maize Dwarf Mosaic Virus:	5
Head Smut:	4
Downy Mildew:	5
Fusarium:	4

PLANT CHARACTERISTICS

Relative Maturity:	Ultra Early	Food Grade:	No
Days to Mid-Bloom:	50-54	Plant Height:	42-48 in.
Days to Maturity:	85-90	Head type:	Semi-open
Grain Color:	Red	Head Exertion:	5
Plant Color:	Purple	Seed Treatment:	Untreated

Plant characteristics, agronomic info, and disease tolerances: 5=best, 1 = poorest

PLANTING RATE & YIELD POTENTIAL

Irrigated Bu/Acre Yield Potential (Optimal Conditions):	100-120
Approximate Seeds / Lb:	16,000
Non-Irrigated Planting Rate (Seeds / Acre):	25,000-45,000
Irrigated (8+ in. / season) Planting Rate (Seeds / Acre):	60,000-80,000

The Information provided, ratings, and potential yield is not a guarantee of results. Suggested planting rates are guidelines, and local conditions and best practices should be considered when determining your rate.
