TEST COMMENTS:

Good stands and early season vigor were a result of timely rain early that continued all season without exceptionally dry periods or flooding. Rainfall totals were near normal in this area which provided a good opportunity for excellent ear development and pollination. This site ended 1.3" above the 30-yr average from 5/1 to 9/15. Goosenecked plants were common across the trials and appeared to be hybrid specific. Lodging scores reflect root lodging that occurred after pollination and impacted the harvestability of some hybrids.
