### TEST COMMENTS:

We planted into good conditions on this strip-tilled field. A frost on May 27 affected some of the plants in the lower-lying north end of the plot site. Warm and dry weather in June caused the roots to go deep in search of moisture. This helped sustain the corn through rainfall that was about 5.5" below normal. Rainfall came just in time to keep the crop growing. Corn generally stood quite well here at harvest. Warm temperatures up to harvest allowed early and full-season varieties to express their yields.
