TEST COMMENTS:

Some cool and wet soils during late April and the first part of May pushed back our planting date a couple weeks later than normal. Warmer weather returned and by the end of May, the plot had emerged very well overall. Plant health was good with very little disease pressure in the plot. Ear formation and pollination occurred through very dry soil conditions that covered this part of Iowa, resulting in stressed plants during key yield-determining stages. That stress was evident and held back top-end yields. Besides one big shower on Aug 28 that brought 1.8" of rainfall, not much rain fell during the growing season, which ended well below the 10-yr average for this region.
