### TEST COMMENTS:

Planted into great conditions, but the main growing season brought very little moisture here. Hail after tasseling also affected this plot. Eric told me his yields were 129-160 bpa so far, which is far below his long-term average. Plants were shorter than average and stood well, but stalks were definitely cannibalized to put every bit of energy into reproduction. The Ultra Early and Full Season maturity products had the highest average yield, matching the timing of the rains that did fall. One replicate of the full season test was removed due to higher yield variability there.
