TEST COMMENTS:

A wet spring prior to planting provided good moisture to get corn started. Brian recorded only 4.71" rain from planting through Sept 23rd, but did not see plant stress until late July. The growing season here was more dry than the drought of 1988, making it the 4th driest season on record. Corn yields were excellent considering the hot and dry summer months. Brian believes seed genetics improvement provided the biggest boost to yields this year. Plants mostly stood well at harvest. Stalk lodging showed in some plots, as plants pulled nutrients from the plant to put yield into the kernels. Harvest was delayed due to a week of rain that will help next year's crops.
