TEST COMMENTS:

This site was planted in a narrow window and like most of the region received several rain events soon after planting. Plants emerged uniformly and pushed through the cold wet season to make for a good result in the end. This was a uniform test site with good standability across the board. This location makes for a great comparison of products across years. As we wrap up the season, like most areas the dry conditions prevail and will most likely set the stage for the 2025 growing season.
