### TEST COMMENTS:

Dry planting conditions were followed by heavy rains in June. This site was on high ground, so no water stood in the plot. Several foliar diseases were seen in this field. The corn stayed green all summer, but dry and warm conditions prevailed through September and October. Corn plants stood quite well, but visually it was obvious that the plants put all their energy into kernel reproduction, as stalks were thin and brittle at harvest time. Brian noted that corn yields have been "all over the board" for them this year. Fields with good drainage yielded much better than fields with lower elevation.
