TEST COMMENTS:

This plot was planted a month after the rest of Eric's field, and conditions were fine, but not optimal. At this later planting, the plot experienced heavy rain prior to emergence and throughout the month of June. Moisture was adequate to abundant most of the season. This site received some light hail in July. There was no fungicide applied to the plot due to the later planting date vs. the rest of the field. Plants stood very well at harvest. High 30-40 mph winds on the harvest date had no effect on plants, even though stalks were dry and brittle. Eric's field around the plot produced his best yields ever. These plots showed a lot of the same great yields that Eric saw.
