

RISEUP + BIOGUARD APPROVAL & ORDERING PROCESS FOR 2025

Blue River organic and Viking non-GMO seed offers farmers a biological custom-treatment for seed corn being planted in 2025. RiseUp + BioGuard is OMRI-approved, **with restrictions**.

1. Growers need to include the individual seed treatments in their Organic System Plan under Seed Treatment or Coatings section. Labels and OMRI Certificates should also be attached to their Organic System Plan.
2. A grower's organic certifier or agency must approve use of these seed treatments before seeds can be planted.
3. Orders must be placed with your seed dealer by December 1st, 2024, and paid in full by January 15th, 2025.
4. Minimum order: 8 bags (per hybrid) Available on these hybrids only:
Blue River Organic: 84-95UP, 46-02P, 84-04P, 75-07P, 85-09P, 76-11P
Viking Conventional Non-GMO: 42-92P, 73-97P, 46-02P, 84-04P, 85-09P
5. Once seed is paid for and treated, we will not accept cancellations or returns.
6. Seed will be colored as any EPA registered Seed Treatments must be treated with OMRI approved colorant.
7. Any on-farm added organic seed treatments added need to be approved by Albert Lea Seed as some on farm treatments can have a detrimental effect on performance.
8. We recommend planting seed corn treated with RiseUp + BioGuard in soil that is at least 50 degrees at 3 inches at 7 a.m. and with a favorable 5-day forecast. RiseUp + BioGuard does not offer the same level of seedling protection as non-biological fungicides & insecticides.
9. Questions? Please call your dealer, RSM, or 800-352-5247
