RISEUP SEED TREATMENT FOR THE 2026 PLANTING SEASON

All Blue River organic and Viking non-GMO corn for organic farmers will be coated with RiseUp, our label for organic-compliant seed treatments that promote strong emergence, early vigor, and robust development that leads to healthy, highly productive plants. All of the treatments listed below are OMRI listed without restriction, and the OMRI certificates are posted on our website and the OMRI website. Please note that RiseUp + BioGuard is a separate, custom treatment (refer to our website or contact us for more information).

For the 2026 planting season, the following treatments could be on your RiseUp-treated corn:

- SoilBiotics® SeedStart 200
- SabrEx™ Root Inoculant for Corn LQ
- SoilBiotics® 1r
- LALRISE® START SC
- LALRISE® PRIME
- SeedWorx™ Fortiflo Organic

The combination of treatments cannot be ordered or specified in advance. It is dependent on the location and timing of the seed cleaning and treatment process. Each bag or pro-box will be labeled with a tag specifying the treatments on the seed in that container.

Please call your Blue River or Albert Lea Seed sales associate for more information at 800.352.5247.

Regards,

Mac Ehrhardt, Chairman
Albert Lea Seed House, Inc.
