SHOGUN BRAND RED CLOVER

A HIGH-YIELDING, DOUBLE-CUT RED CLOVER

- High-yielding, multi-cut red clover
- Selected for improved disease resistance and forage production
- Exhibits early spring growth with more N fixation potential early
- Excellent as a green manure crop before corn or vegetable crops; frost seed into winter wheat or under a spring small grain
- Improved for maximum biomass production in the seeding year
- Fast establishment and recovery after cutting for higher N fixation
- Helps create a loamy topsoil while suppressing weeds and fixing N
- Inoculated with OMRI-approved inoculant
- Suitable for dairy and beef cattle, sheep and goats, wildlife, hay and pasture, silage, or cover cropping

AGRONOMIC TRAITS & DISEASE RESISTANCE

Forage Yield:	Excellent	Drought Tolerance:	Excellent
Forage Quality:	Excellent	Moisture Tolerance:	Good
Maturity:	Medium	Hay:	Good
Persistence:	Excellent	Silage:	Good
Palatability:	Excellent	Pasture:	Excellent
Growth Habit:	Taproot	Growth:	Spring-Fall

PLANTING GUIDE

Seeding Rate:	8-12 lbs/acre drilled 1/4" to 1/2" deep (Increase rate 30-50% to broadcast)
Days to Germinate:	7-14
Average Seeds / LB:	270,000
Ease of Establishment:	Excellent
Life Cycle:	Short-lived Perennial
