

RISEUP + BIOGUARD APPROVAL & ORDERING PROCESS FOR 2026

Blue River Organic and Viking Non-GMO Seed offers growers a biological custom-treatment for seed corn being planted in 2026. RiseUp + BioGuard is OMRI-approved, **with restrictions**.

1. A grower's organic certifier must approve the use of these seed treatments and have them approved as inputs before seeds can be planted.
2. Orders must be placed with a seed dealer by November 1, 2025, and paid in full by January 15, 2026.
3. Minimum order of 8 bags (per hybrid). Available on these hybrids only:
Blue River Organic: 84-95UP, 46-02P, 75-07P, 85-09P, 76-11P
Viking Conventional Non-GMO: RU48-90P, RU73-97P, RU49-05P
4. Once seed is paid for and treated, we will not accept cancellations or returns.
5. Any extra on-farm organic seed treatments added by the grower need to be approved by Albert Lea Seed as some on-farm treatments can have a detrimental effect on performance.
6. We recommend planting seed corn treated with RiseUp + BioGuard in soil that is at least 50 degrees at 3 inches at 7 a.m. and with a favorable 5-day forecast. RiseUp + BioGuard does not offer the same level of seedling protection as non-biological fungicides & insecticides.
7. Questions? Please call your dealer, RSM, or 800-352-5247.
