PEST & DISEASE RISK:	Rootworm, Pythium*

TEST COMMENTS:

Dry weather in the fall of 2025 led to good soil conditions from planting through mid-June. Plants emerged together, and roots went deep in search of moisture. Rainfall in July and August was heavier and bordered on excessive (according to Leon). Warm day and night temps in July and August made for very good corn growing conditions, and the corn reached above average height. September was cooler, with rain again at the end of the month. Rainfall ended the growing season at 1.5" above average. Plants stood well at harvest, with only a few plots showing some stalk breakage below the ear.
