TEST COMMENTS:

This new conventional site was planted in pretty dry conditions and took a few days before a rain came through. Emergence was good but not great. This area was very dry in June and July, not getting any moisture to speak of until the end of July. The plot was standing great, had very good stalk quality, and was very clean of any foliar disease. Early and mid-season moisture was the limiting factor here, coupled with the rest of the growing season's stressors.
