TEST COMMENTS:

Planting conditions were great here, and mostly dry weather continued through June. The good soil tilth encouraged corn roots to grow deep in search of moisture and nutrients. Corn was taller than average here, which matches corn height throughout most of southern Minnesota. Greg stated that it has been a good year for corn and soybean yields, as well as for harvest moisture. This site showed very good yields. Plants were healthy at harvest, with only a few plots showing signs of minor stalk lodging. Greg did apply fungicide at tassel emergence.
